## Why TIC?

---

Technology Information Corporation is the worldwide leader in wave solder process improvement.

With a single-minded focus on wave soldering excellence, proven products and procedures for eliminating wave soldering defects and preventing their recurrence are provided directly to you.

Assisting engineers just like yourself in reaching your quality goals, you will benefit from our successful track record of quickly and significantly improving board quality,

The widely acclaimed Wave Solder Training Workshop and On-Site Expert Troubleshooting programs offer you immediate and enduring results. Your defects are reduced and eliminated. Your entire wave soldering team is empowered with unparalleled insights and proprietary techniques for daily process optimization and continuous improvement of your board quality.

We will teach you how to document your process and progress every step of the way. This includes overcoming defects you may have all but given up on, like those caused by poor board design.

The award winning Wave Optimizer is the most advanced, easy-to-use, accurate, comprehensive, battle-proven and popular wave solder improvement tool. It measures all aspects of your wave soldering process – flux application, temperatures and board-wave interaction – in a single pass through the wave machine. All data is shown to you instantly on its one-of-a-kind display.

Founded in 1992, we are grateful for our premier industry position and continually growing customer base throughout the world.

If you are not already our customer, we will appreciate the opportunity to assist you in significantly reducing your wave soldering defects, quickly lowering your daily production costs and saving your entire team a lot of aggravation. Feel free to contact us if you would like to discuss your specific needs and objectives.
